TEAM NOTES

None.

DISCLOSURES

None supplied.
Accounting period: October 2026 (2026-10-01T04:00:00.000Z through 2026-11-01T03:59:59
.999Z).
Project-owner accounting rule: successful incoming SOL transfers to the tracked walle
t are automatically classified and included as creator-fee income. Attribution follow
s this rule; individual protocol fee claims are not required. Manual annotations can
override the rule.
Project-owner accounting rule: successful decoded swaps spending SOL and receiving SA
N are automatically classified as creator-funded SAN buybacks and included in financi
al totals. Routed SOL-to-SAN swaps qualify when no other input asset is spent. Manual
annotations can override the rule.
Project-owner accounting rule: successful outgoing SOL transfers from the tracked wal
let to Kantaro's wallet (AtLmjAvKeGCMgG7rnMp9ghVPCxm8qJwswpimtEpTV9s8) are automatica
lly classified as creator fees passed to Kantaro to support his journey with SAN, and
included as creator-funded uses. Manual annotations can override the rule.
Project-owner valuation rule: SAN and liquidity-pool tokens have no historical USD pr
ice feed. In SAN buybacks and liquidity transactions they are valued at the USD value
of the SOL exchanged in the same transaction.
30 earlier transactions still need review; opening creator-fee funds are provisional.
1 earlier included transactions have incomplete USD valuations.
Wallet balances are reconstructed from complete wallet and token-account history; inc
omplete backfills cannot be finalized.
SOL totals include committed wallet balance changes, including network fees and accou
nt rent. SOL and WSOL are consolidated.
USD uses historical observations or disclosed manual overrides; unpriced assets are n
ever silently valued at zero.
Creator-fee attribution and funding source are accounting annotations. Wallet balance
is distinct from unallocated creator-fee funds.
